

Instance::getNbrMachines

```
graph RL; H1[Heuristique::resolveMachine  
PerMachine] --> IM[Instance::getNbrMachines]; H2[Heuristique::resolveMachine  
LessUsedMachine] --> IM;
```

The diagram illustrates a dependency or call relationship. On the left, a gray rectangular box contains the text 'Instance::getNbrMachines'. On the right, there are two white rectangular boxes. The top box contains 'Heuristique::resolveMachine' followed by 'PerMachine' on a new line. The bottom box contains 'Heuristique::resolveMachine' followed by 'LessUsedMachine' on a new line. Two blue arrows point from the right side of each of these two boxes towards the right side of the gray box, indicating that both heuristic methods are involved in or call the 'Instance::getNbrMachines' method.

Heuristique::resolveMachine
PerMachine
